

We solve your assembly problems automatically . . .

# QuickCell

## ► Continuous motion assembly cell

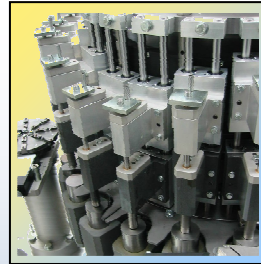

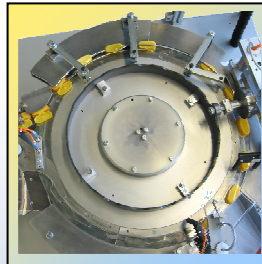

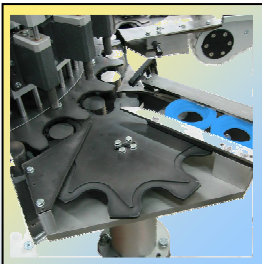

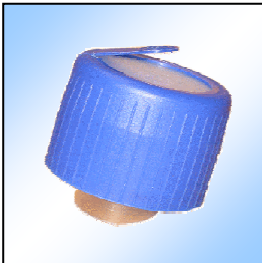

fast, open-ended, modular und reliable

*for the usage in industries like:*

**Plastics – Capping**

**Packaging – Food**

**Cosmetics – Medical devices**

OKU GmbH  
Assembly and Feeding Systems

## Capabilities ► Add-ons ► Training ► Services

### Experience and capabilities

**OKU** is a pioneer in the field of automatic assembly. With 50 years experience, a team of more than 300 specialists - with nearly 70 employees in the R&D department - and more than 6,000 machines in the field, **OKU** ranks among the largest, most reliable and prominent players in the field of automatic assembly.

### Component feeding systems

As one of the most important manufacturers of component feeding systems using vibratory bowl feeders, rotary feeders, spring detangling systems and hoppers, **OKU** has extensive expertise in the feeding of various bulk parts from sharp edges to scratch-sensitive parts.

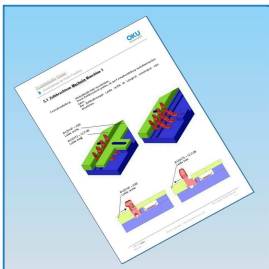

### Training

Complimentary training of your operators and maintenance staff in our **OKU** plant - in the classroom and hands-on training - during the final engineering of your machine is part of **OKU's** overall project delivery. Additional training is possible during the commissioning of your equipment on your production site.

### After-sales service

Thanks to a comprehensive standard spare parts stock, **OKU** is able to ensure spare parts delivery and service within the shortest possible time. The optional remote diagnostics modem to integrate in your assembly machines allows for direct servicing through our programming engineers.

### Feasibility studies for the assembly of new products

**OKU** offers its know-how, in order to help you to define the shapes, geometries and tolerances of the parts to be assembled with regard to simplified and dependable assembly, reduced machine costs and optimized efficiency of your production line.
